

MSD Project – Study App(FocusFlow)

Main Idea

We are planning on building a productivity app called FocusFlow that will help students in particular study efficiently using the pomodoro technique, which is short, focused study sessions followed by short breaks. The app will encourage consistent focus and will track study progress.

Objectives

The objectives for this app will be helping users manage study time effectively, improve focus and productivity using structured intervals while having breaks, reduce the mental fatigue when studying by finding the right balance between work and rest and finally to build consistency and daily streaks through tracking. The app will primarily be targeting university students like ourselves, secondary school students, professionals that are preparing for exams or even certificates and in general anyone looking to improve their focus and time management.

Goals

1. Create a user-friendly and motivating study environment.
2. Integrate Pomodoro sessions with notifications and reminders.
3. Allow users to set personal study goals and track progress visually.
4. Offer insights and analytics on time spent and productivity levels.
5. Build community features for shared motivation and accountability.

Key Features

1. Pomodoro Timer

Customizable 25-minute focus sessions with optional short and long breaks.

Simple Start/Stop button for seamless control.

Smooth countdown animation and sound/vibration alerts when sessions end.

2. Light & Dark Mode

Instantly switch between Light Mode and Dark Mode via a clean toggle switch.

UI adapts automatically to user preferences or system theme.

Ensures eye comfort for day and night usage.

3. Streak Tracker

Visual streak icons (flame/droplet symbols) track consecutive focus sessions.

Encourages productivity consistency through visual progress rewards.

Option to reset or view streak history-
